Draft Report: 5 Transformation Drivers

- Clinical integration and payment reform
- Special populations
- Population health innovations
- Workforce innovations
- Learning health care system innovations

Challenges

- Alignment around a shared vision
- Investment in levers to achieve goals
- Barriers to transformation
- Changing mindsets

Call to Action

- Collaboration among key stakeholders
- Focus on population health
- Build capacity to achieve goals
- Measure progress

A Shared Vision for Illinois Health Care

Of the many challenges facing the state of Illinois, creating a new health care system—one that's characterized by **lower costs, higher quality and greater access**—is among the most important. The health and well-being of individuals and communities—who are essential to the economic and social vitality of our state—are at stake.

Challenges to Our Current System

As the federal Affordable Care Act (ACA) and Illinois' Save Medicaid Access and Resources Together (SMART) Act are implemented, the health care community of providers—hospitals, physicians, nurses, community-based service providers, and others—will confront unprecedented challenges.

- **By January 2014:**
 - Illinois' Health Insurance Marketplace must begin providing coverage.
 - Medicaid will be expanded to cover currently uninsured individuals;
 - Medicaid payment systems for hospital care will be in transition; and
 - The Medicare Bundled Payment initiative will have begun adding more participating providers.
- **The state is quickly moving individuals to managed/coordinated care so that 50% of Medicaid recipients will be in coordinated care by January 1, 2015.**
- **The SMART Act reduces Medicaid spending by \$1.6 billion through service cuts, stricter eligibility screening and provider payment reductions.**

Our situation calls for a clear vision, a comprehensive plan and a detailed roadmap to transform the quality, capabilities and efficiency of our health care system.

Under the leadership of the IHA Board of Trustees and its Task Force for Transforming Illinois Health Care, the Illinois hospital community is setting forth its plan—a blueprint—to transform our health care system to achieve improved care for more individuals at less cost. It's based on the following vision and principles.

IHA Principles for Health Care Transformation

- 1. Triple Aim—**Providers passionately pursue the interdependent goals of the Triple Aim:
 - Quality.** Providing optimal, error-free, patient-engaged care.
 - Population Health.** Improving the health of defined populations through equitable and accessible wellness, prevention, care management, and palliative care approaches; and
 - Lower Cost.** Reducing the per patient health care costs through greater effectiveness, efficiency and waste elimination.
- 2. Coverage and Access—**Providers and payers provide access and coverage for all across diverse communities through a well-managed, affordable health system.

IHA Vision For Illinois Health Care

All individuals, and communities deserve access to high quality health care at the right time and in the right setting to support each person's quest for optimum health.
