The plan is a disaster in the making. The aim of this plan is to give the people who drain the public coffers the best possible health care. Once again the middle class is screwed. Make no mistake about it - middle class taxes will go up to cover health services for these non productive people. Not just income taxes, but all sorts of fees hidden in our pay stubs and the various bills that we pay to non government entities.

The extensive paperwork doctors will be filling out for this "whole person centered care" nonsense is impossible to sustain! Are you people crazy!!! Instead of improving healthcare for the least productive of residents, you will grind it to a virtual halt for all of us. My friend's son recently got a job working the counter at Walgreens pharmacy. He told me he fills prescriptions. I was flabbergasted! I asked what the pharmacists were doing. He answered "paperwork" . This is the future of American healthcare. And we apparently have the government to thank for it.

Thanks for nothing!
